
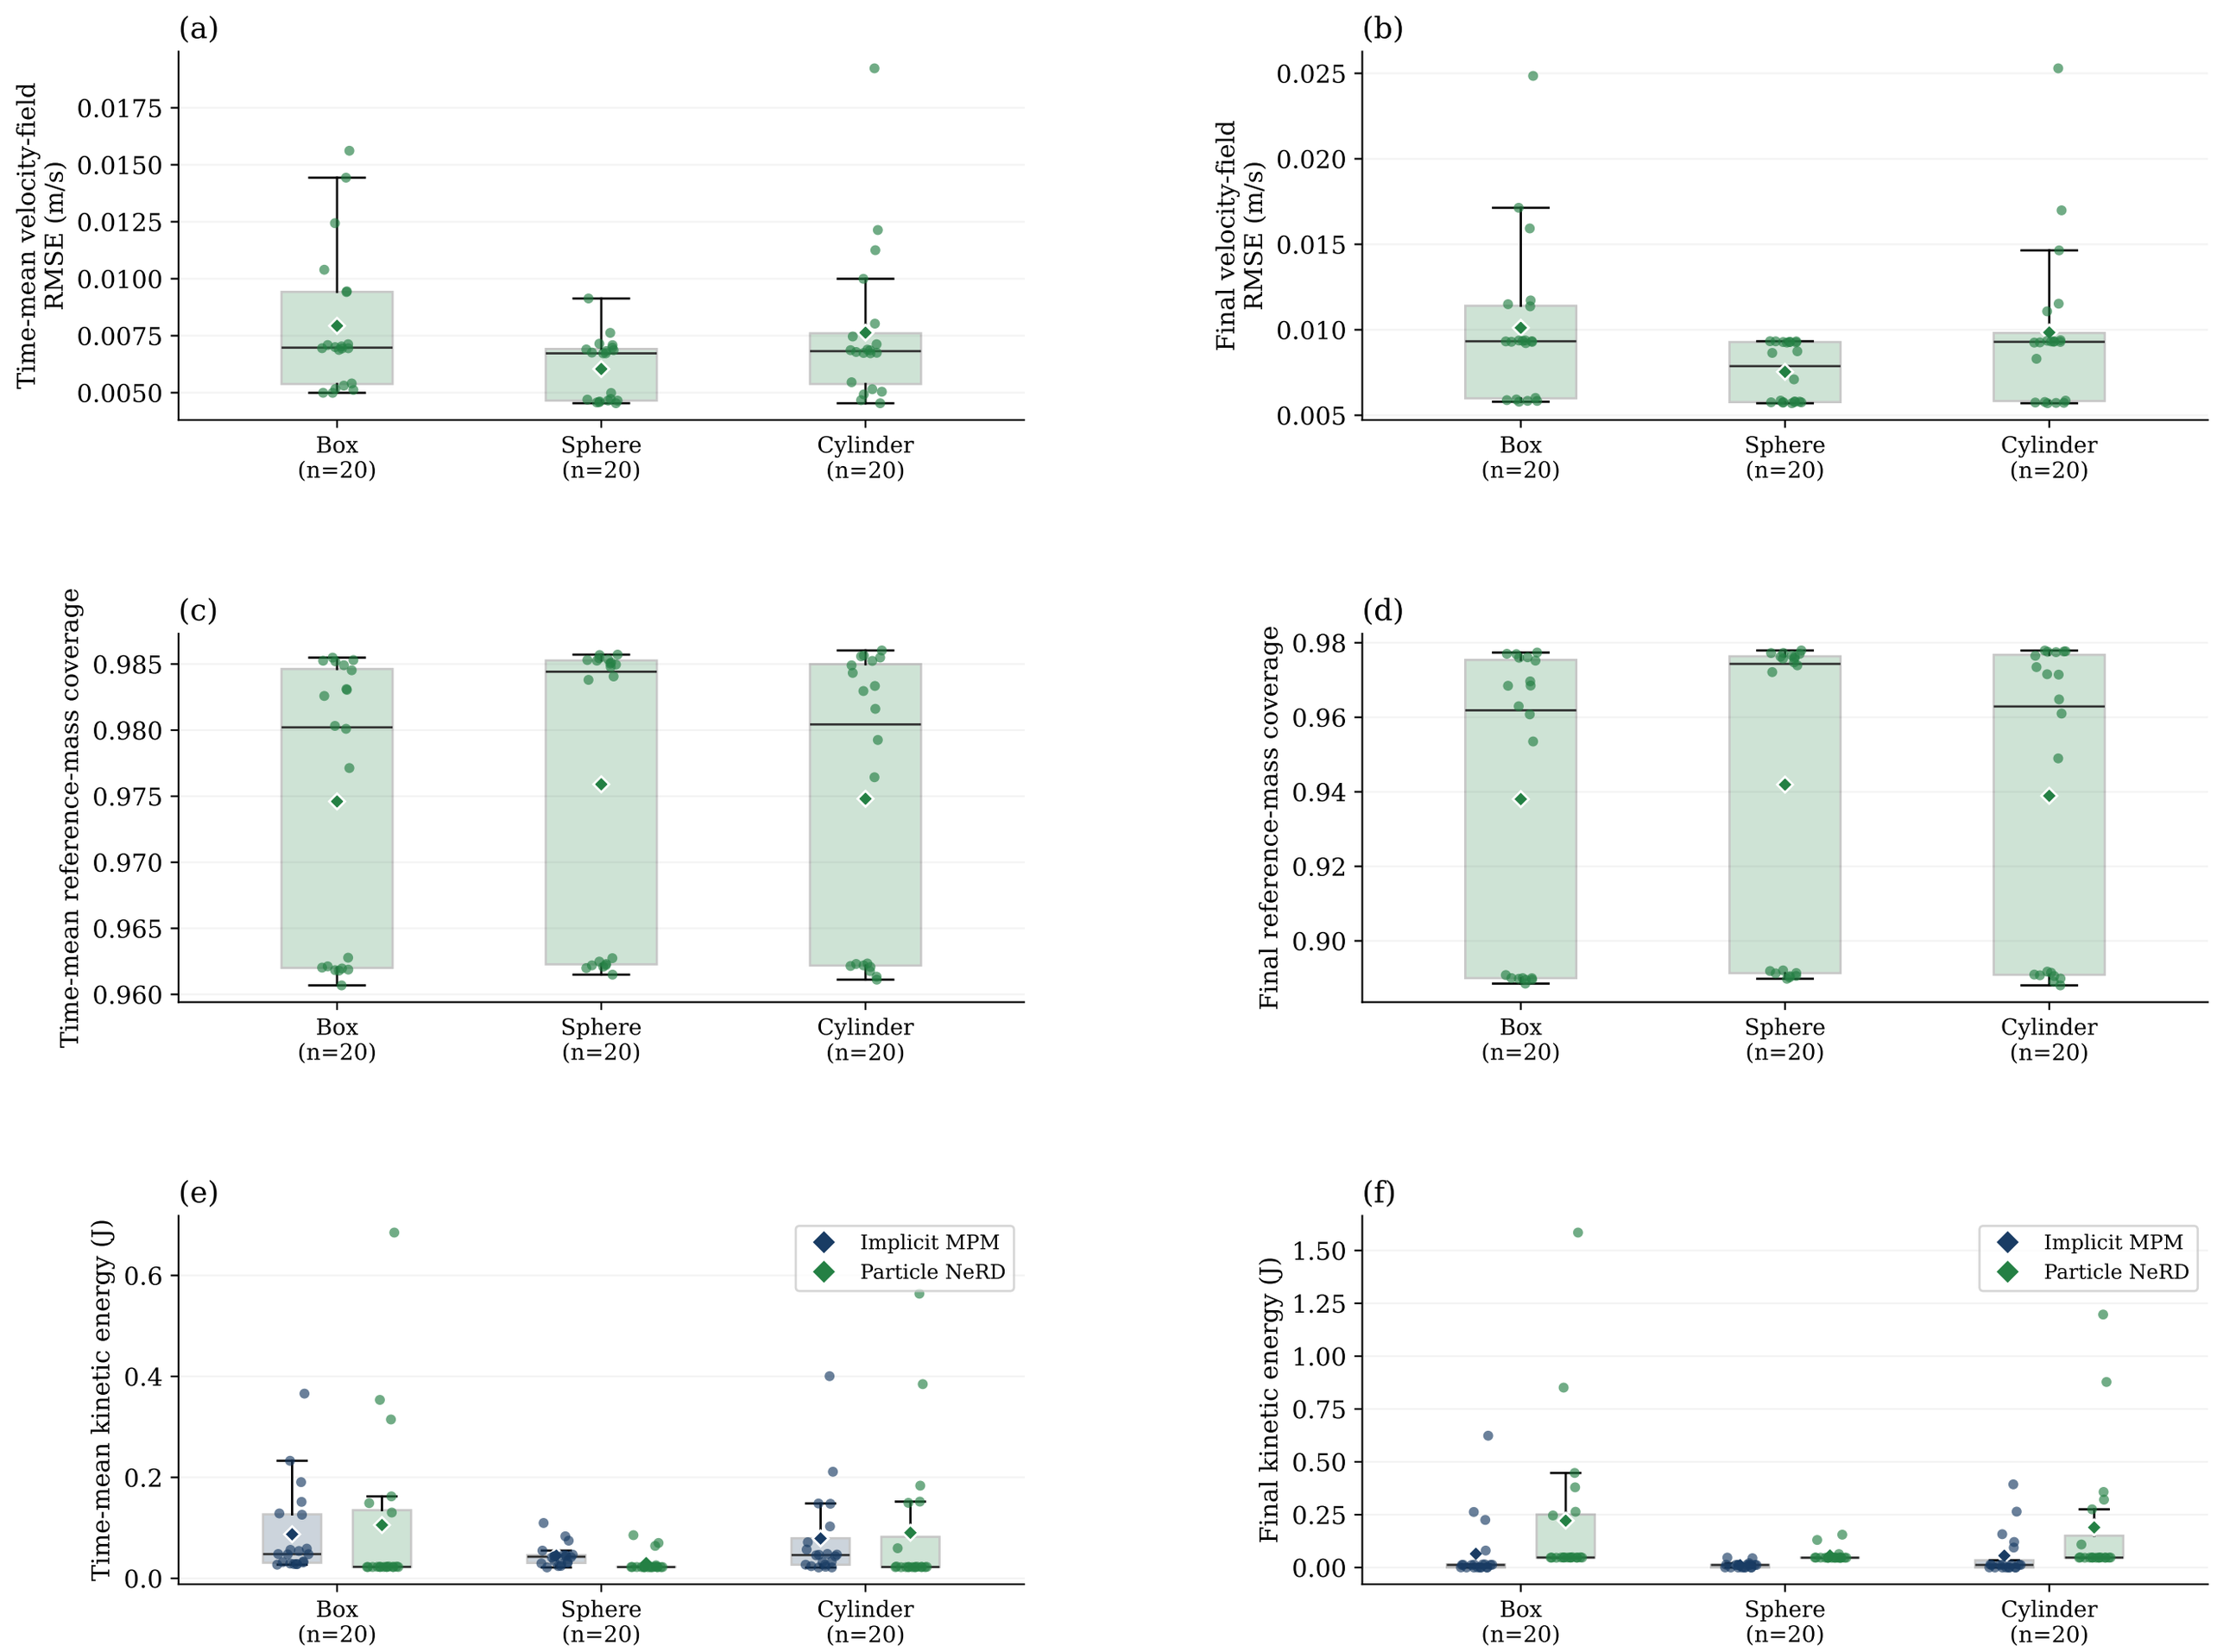

Figure 5: Frozen object-model checkpoint 9,000. (a,b) Time-mean and final velocity-field RMSE; (c,d) corresponding fractions of reference mass covered by shared occupied cells; (e,f) time-mean and final particle kinetic energy. Velocities use matched consecutive-position differences. Each dot is one trajectory summary; boxes show the median and interquartile range, whiskers extend to 1.5 IQR, diamonds mark means. Twenty trajectories per shape unless labeled otherwise. Time means use available samples; empty particle regions are not assigned zero error.
