Long-Horizon Simulation Evaluation (23 s): Kinematic Vertical Insertion (1–2 s) + Fixed-Pose Hold (2–23 s)

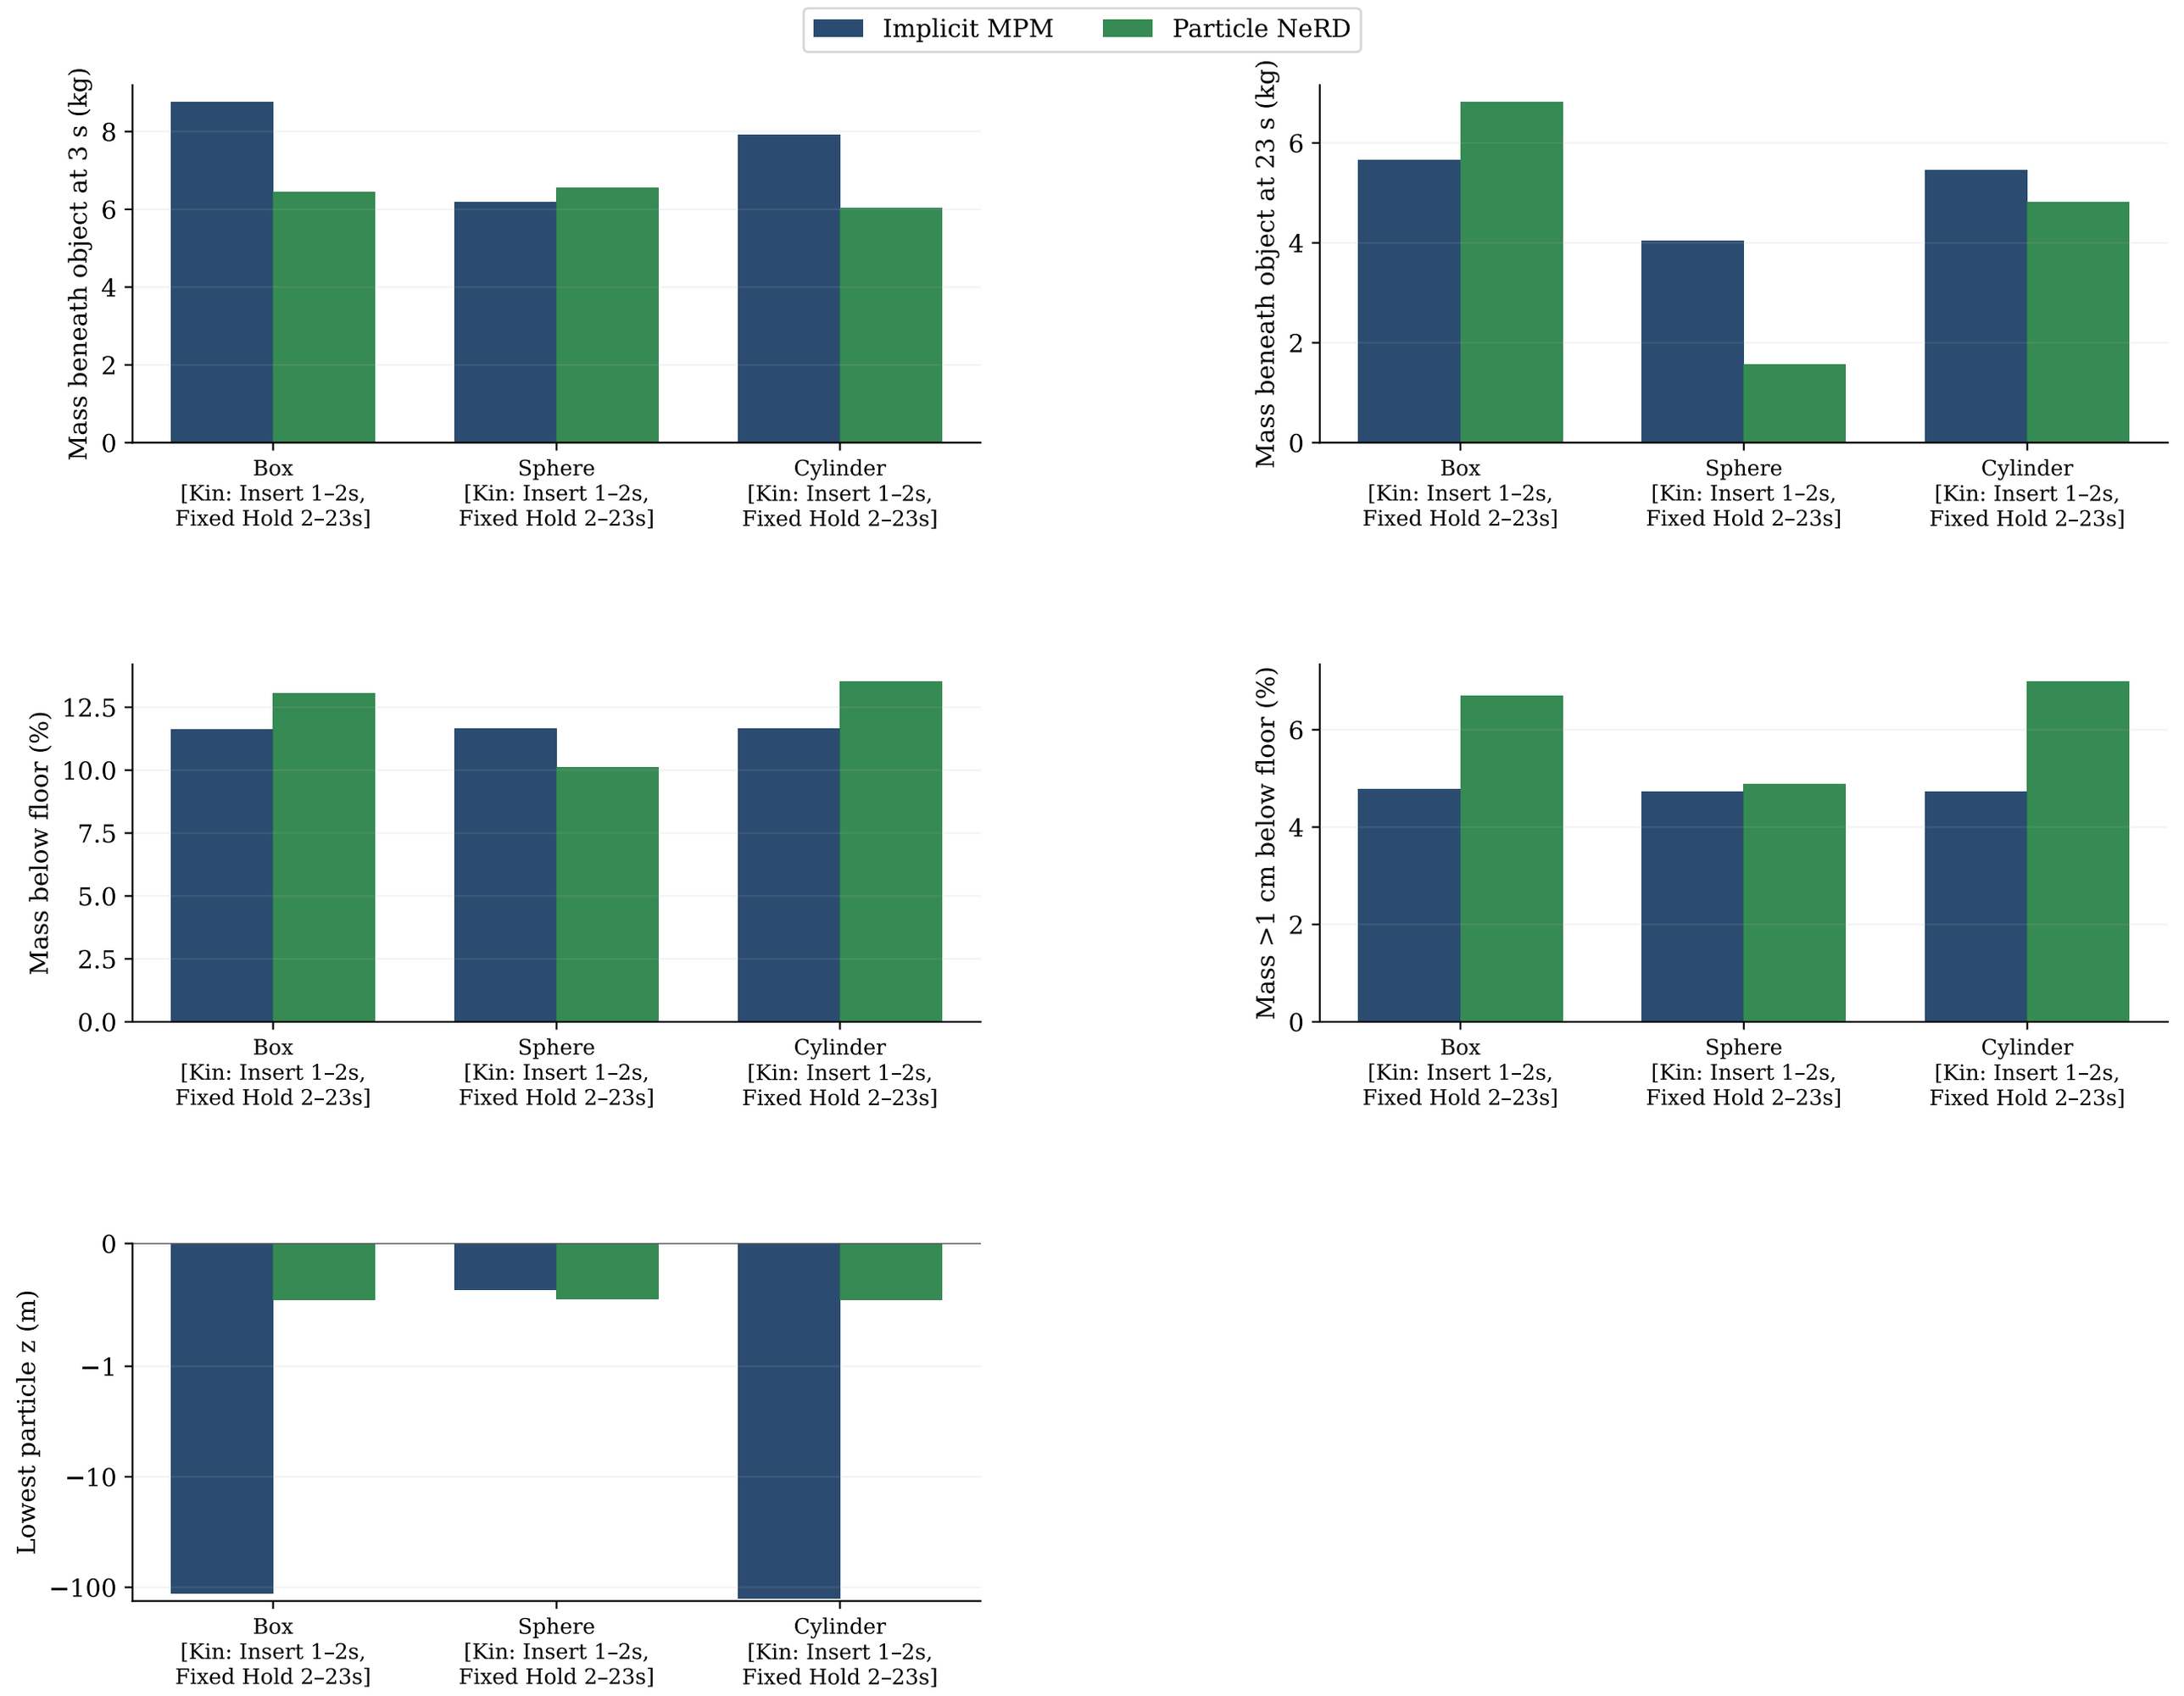

Figure 8: Frozen object-model checkpoint 11,000. Long-horizon 23-second evaluation (Kinematic Motion: 2–23 s Fixed-Pose Hold for Box, Sphere, and Cylinder). Top row: physical mass beneath the object at 3 and 23 s. Middle row: mass below the z=−0.30 m floor. Last panel: lowest particle z at 23 s.
