Group B: By Object Motion (Per-Shape Breakdown: Box, Sphere, Cylinder) — Kinematic (n=3/obj) | Dynamic (n=2/obj)

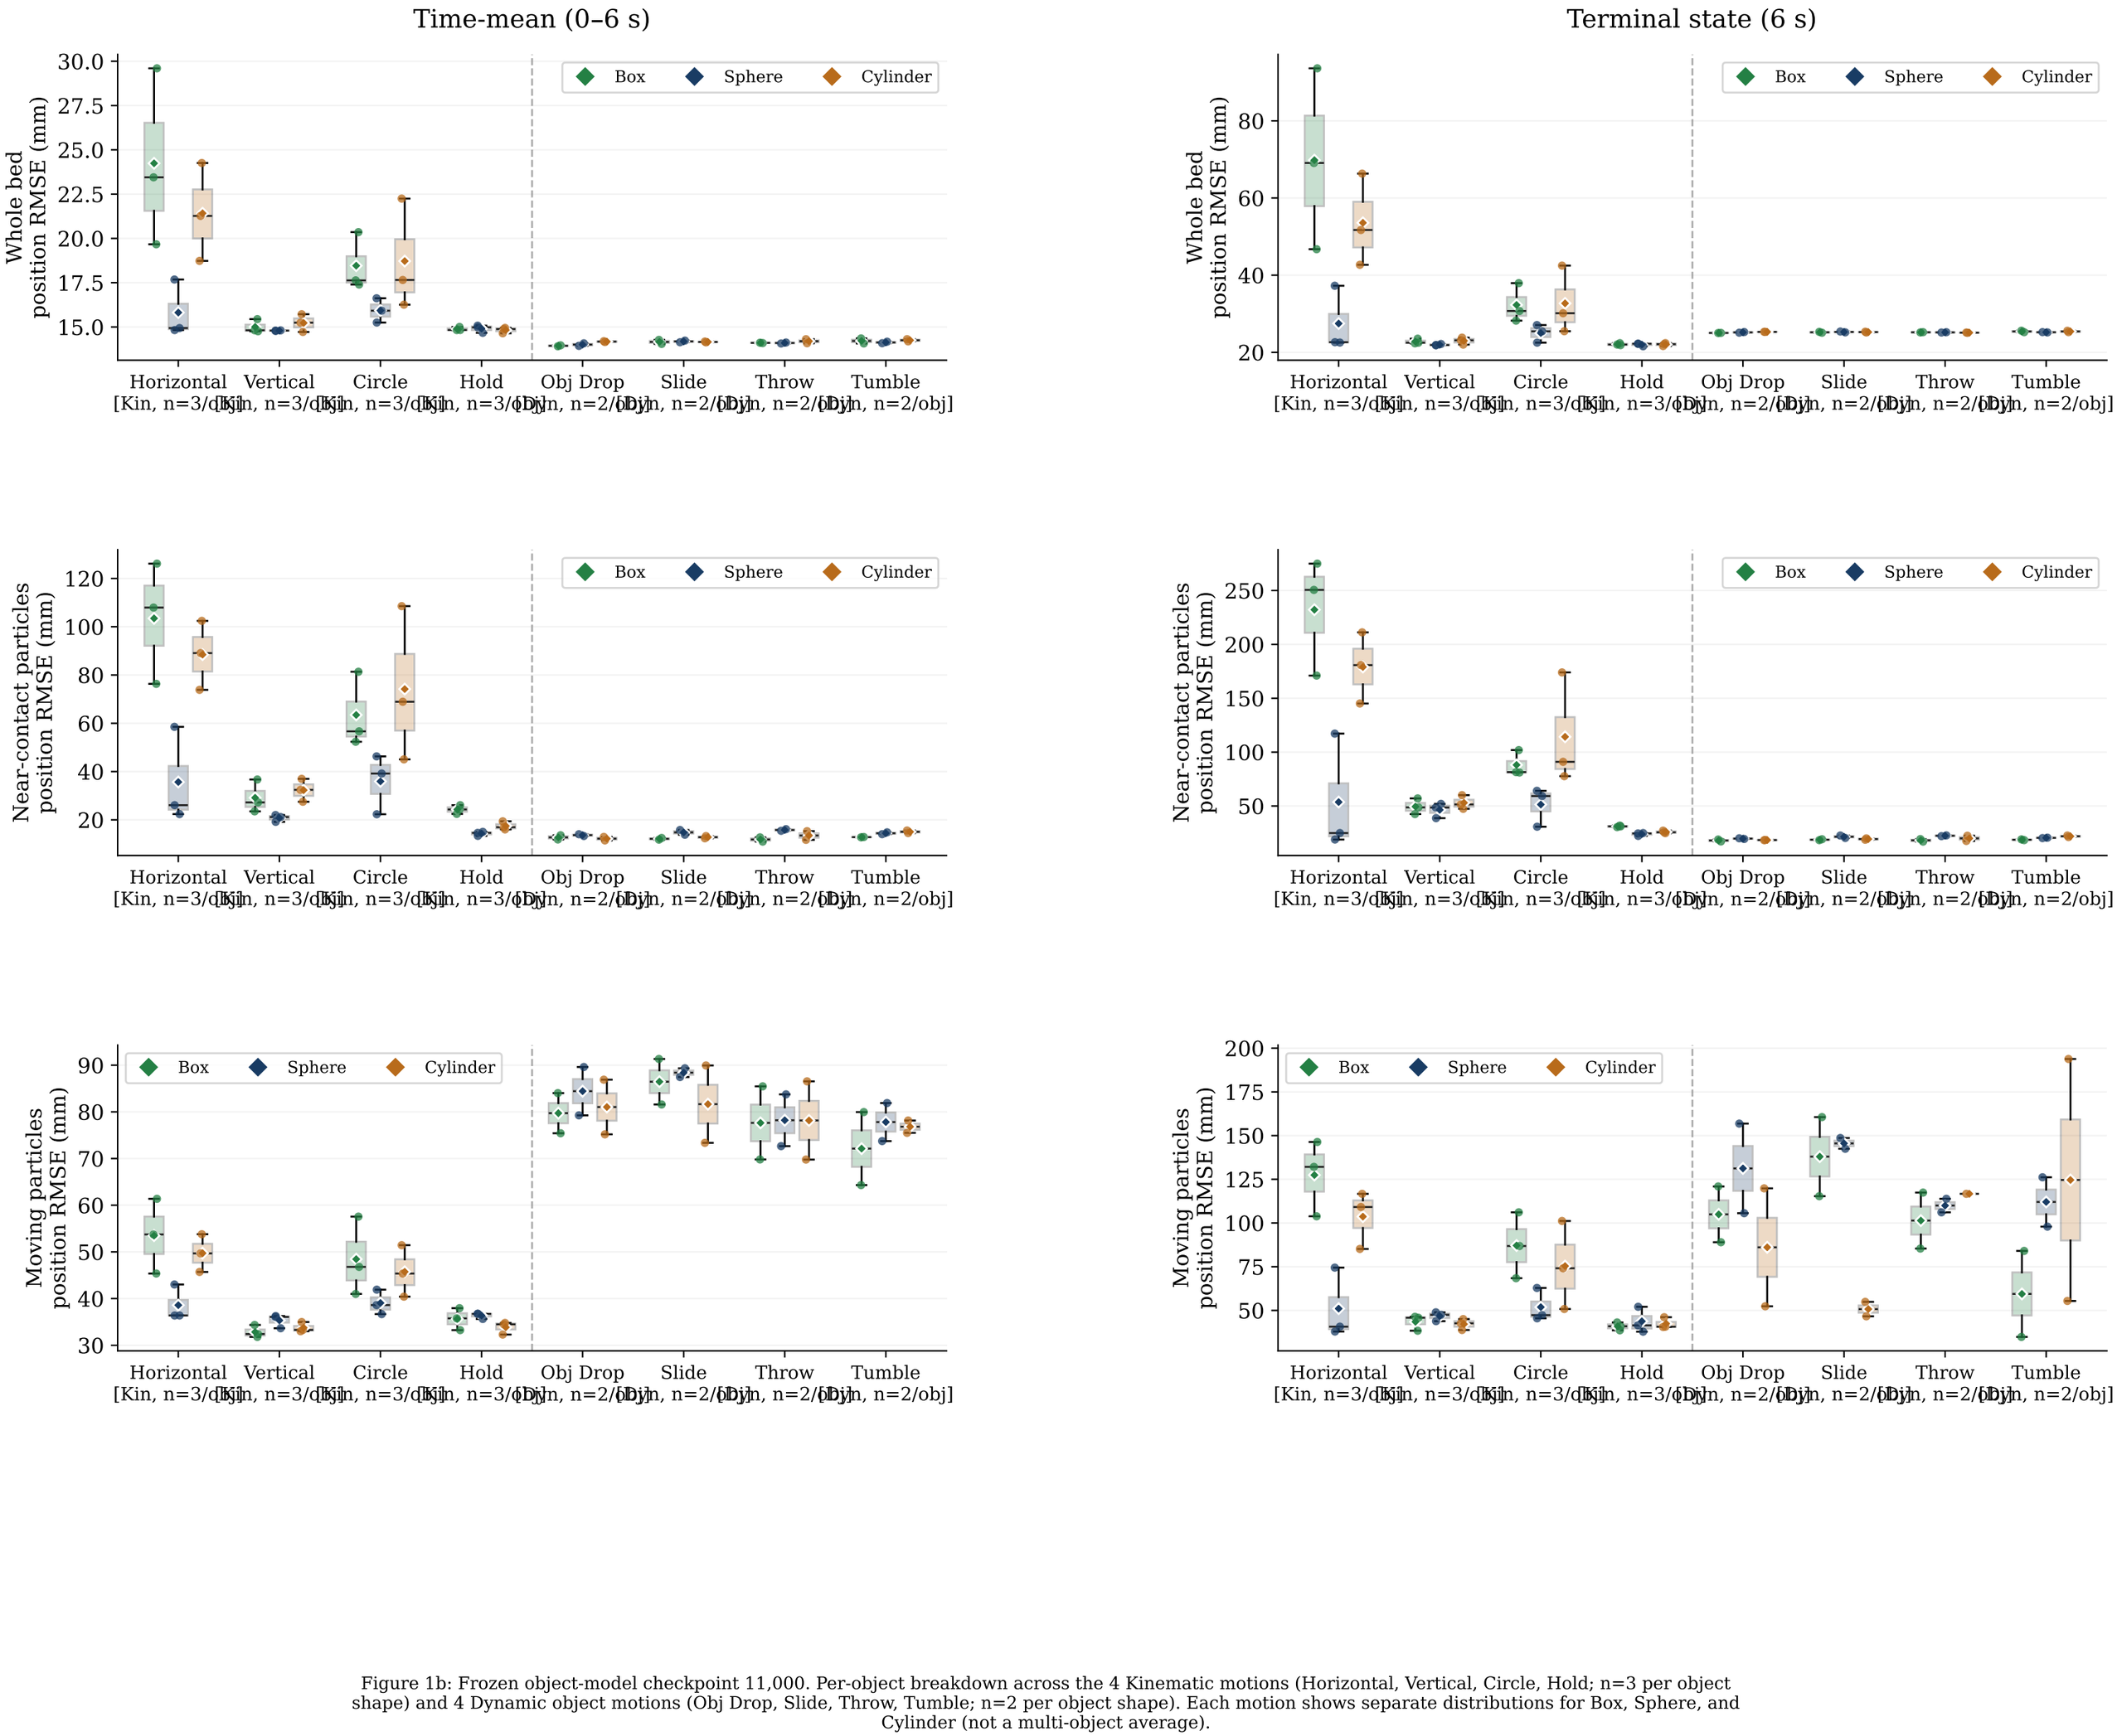

Figure 1b: Frozen object-model checkpoint 11,000. Per-object breakdown across the 4 Kinematic motions (Horizontal, Vertical, Circle, Hold; n=3 per object shape) and 4 Dynamic object motions (Obj Drop, Slide, Throw, Tumble; n=2 per object shape). Each motion shows separate distributions for Box, Sphere, and Cylinder (not a multi-object average).
