

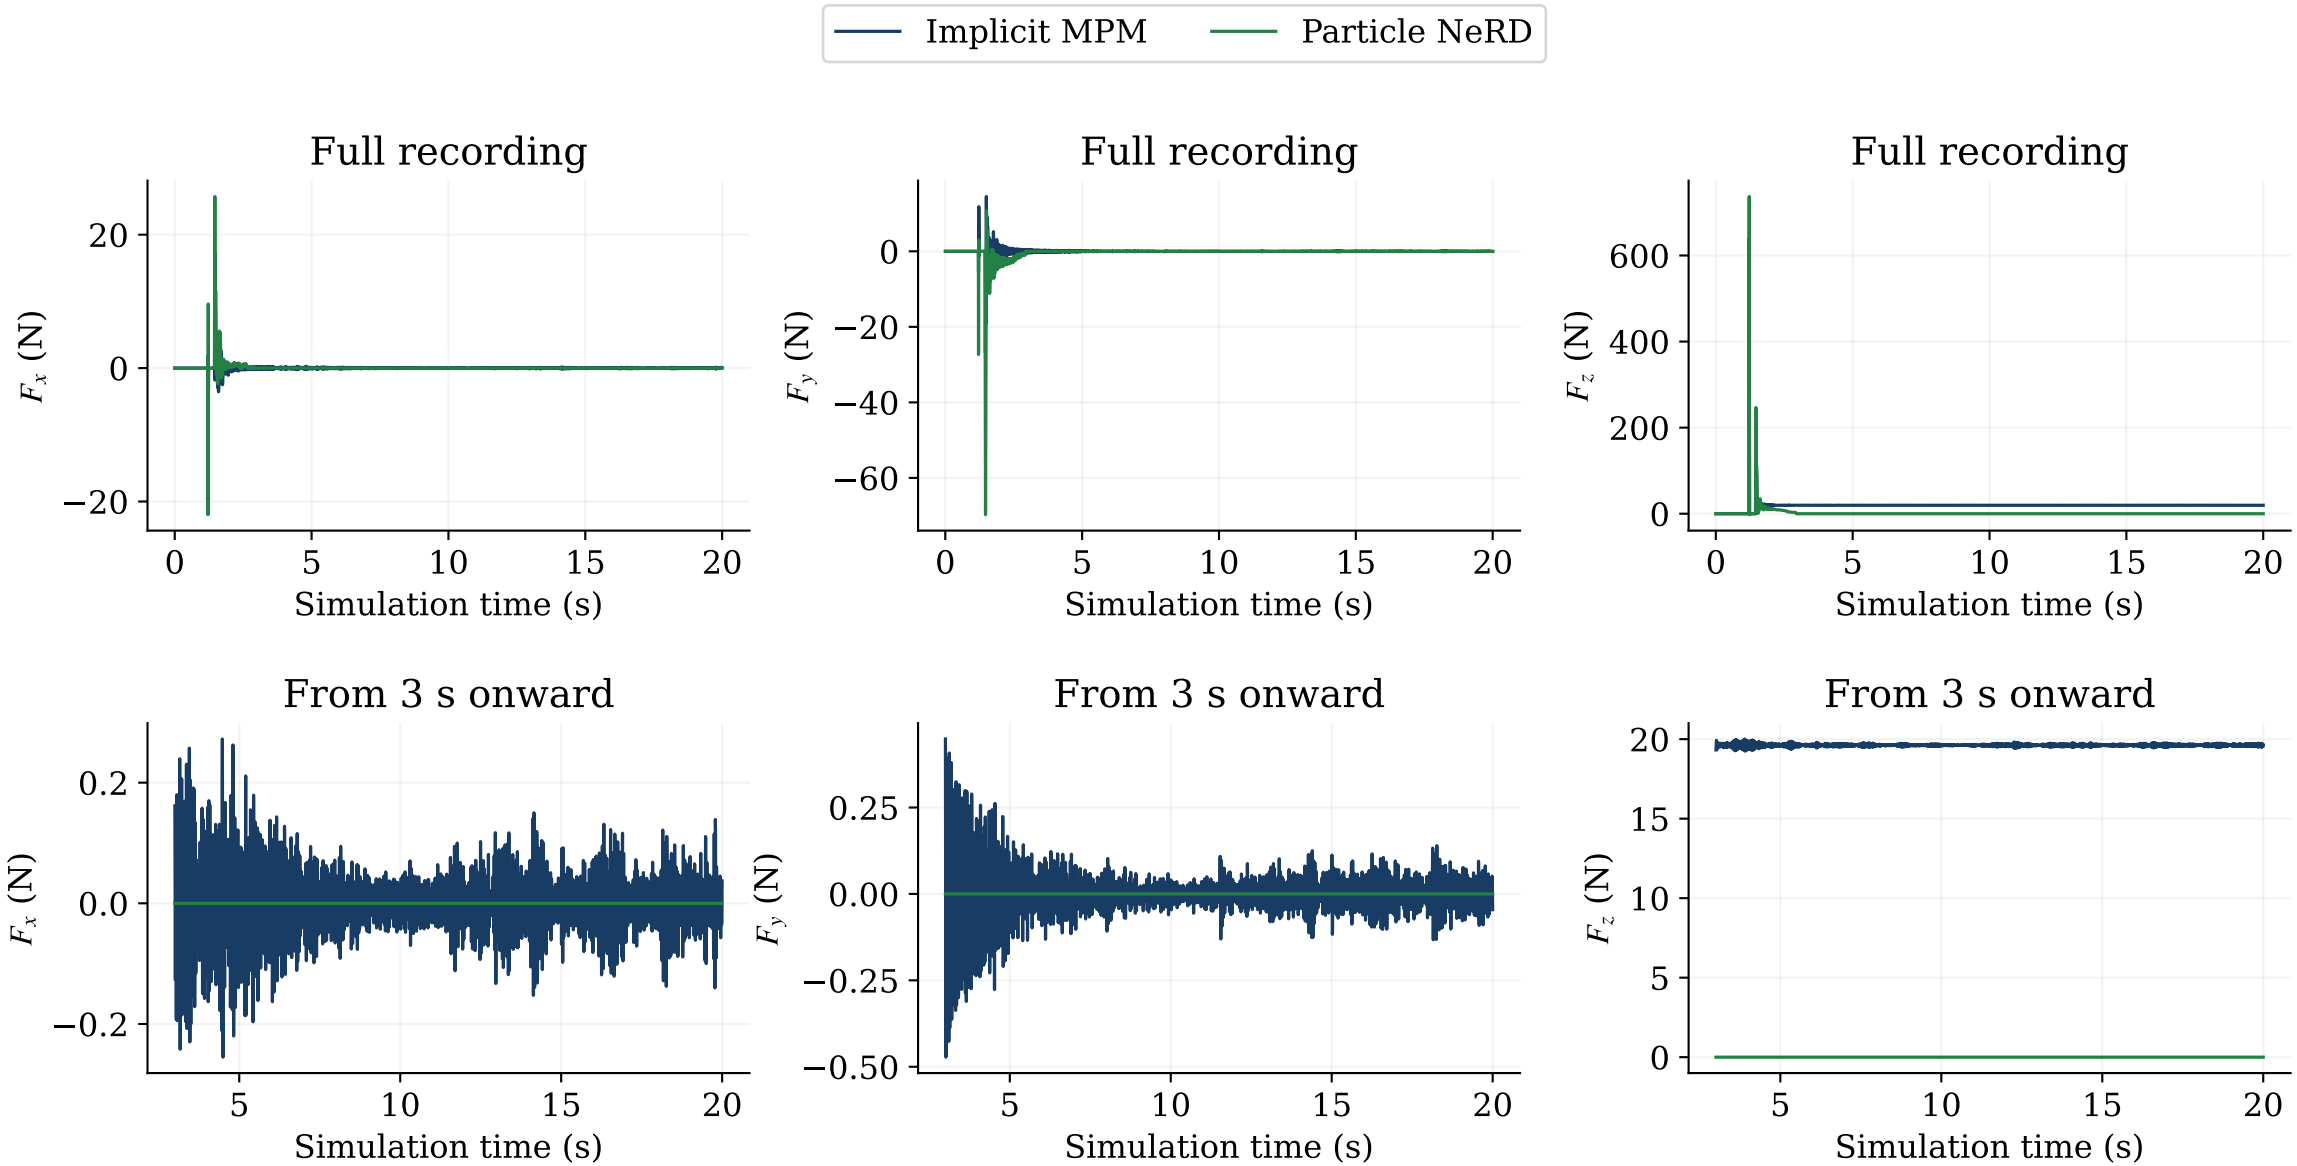

Figure 2: One paired rollout; raw world-frame material-on-object forces at 200 Hz, +z upward.
Left to right: Fx, Fy, Fz over the full recording.
Bottom row: Fx, Fy, Fz from 3 s onward, with expanded force scales to show sustained support.
Recorded MPM body motion and free velocities are imposed; estimates do not feed back to the body.
Particle NeRD uses recurrent particle predictions; direct rigid-tray forces are excluded.
