
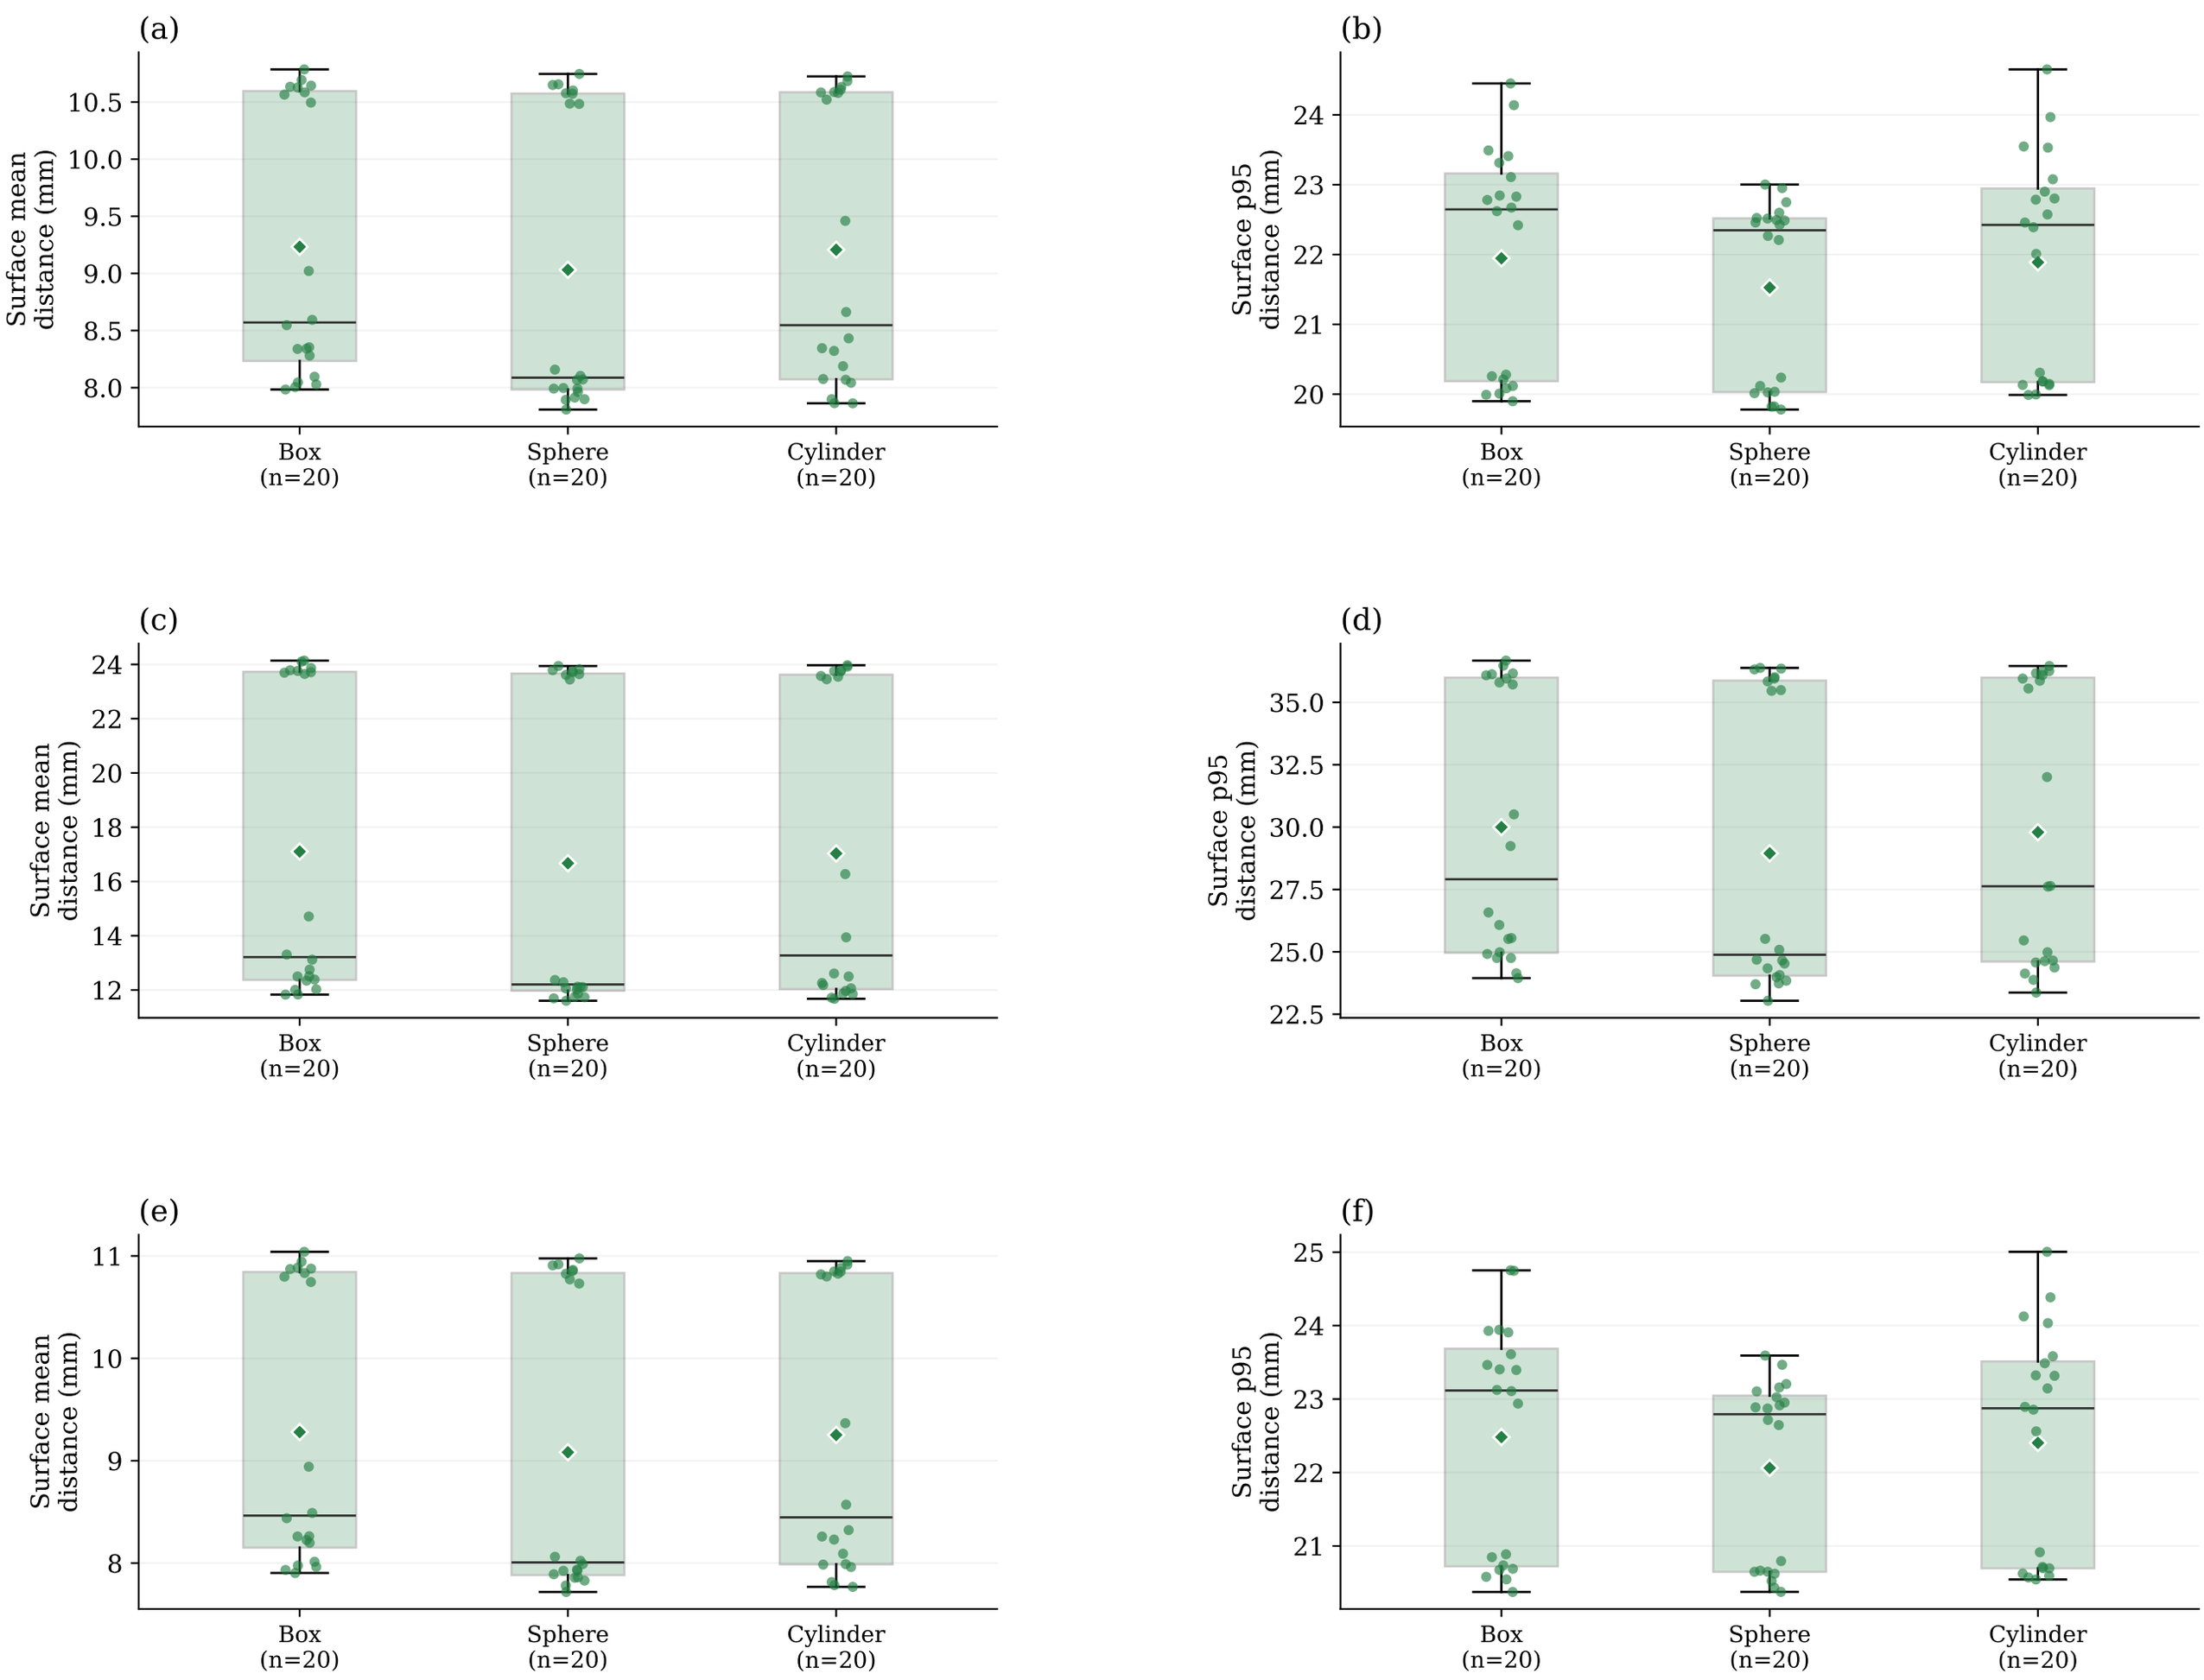

Figure 3: Frozen object-model checkpoint 9,000. (a,b) Time-mean surface distance and spatial p95; (c,d) final surface distance and p95; (e,f) time-mean distance and p95 using the coarser 0.03 m reconstruction grid instead of 0.02 m. Distances are symmetric, area-sampled, and unaligned. Spatial p95 differs from variability across trajectories. Each dot is one trajectory summary; boxes show the median and interquartile range, whiskers extend to 1.5 IQR, diamonds mark means. Twenty trajectories per shape unless labeled otherwise. Time means use available samples; empty particle regions are not assigned zero error.
