
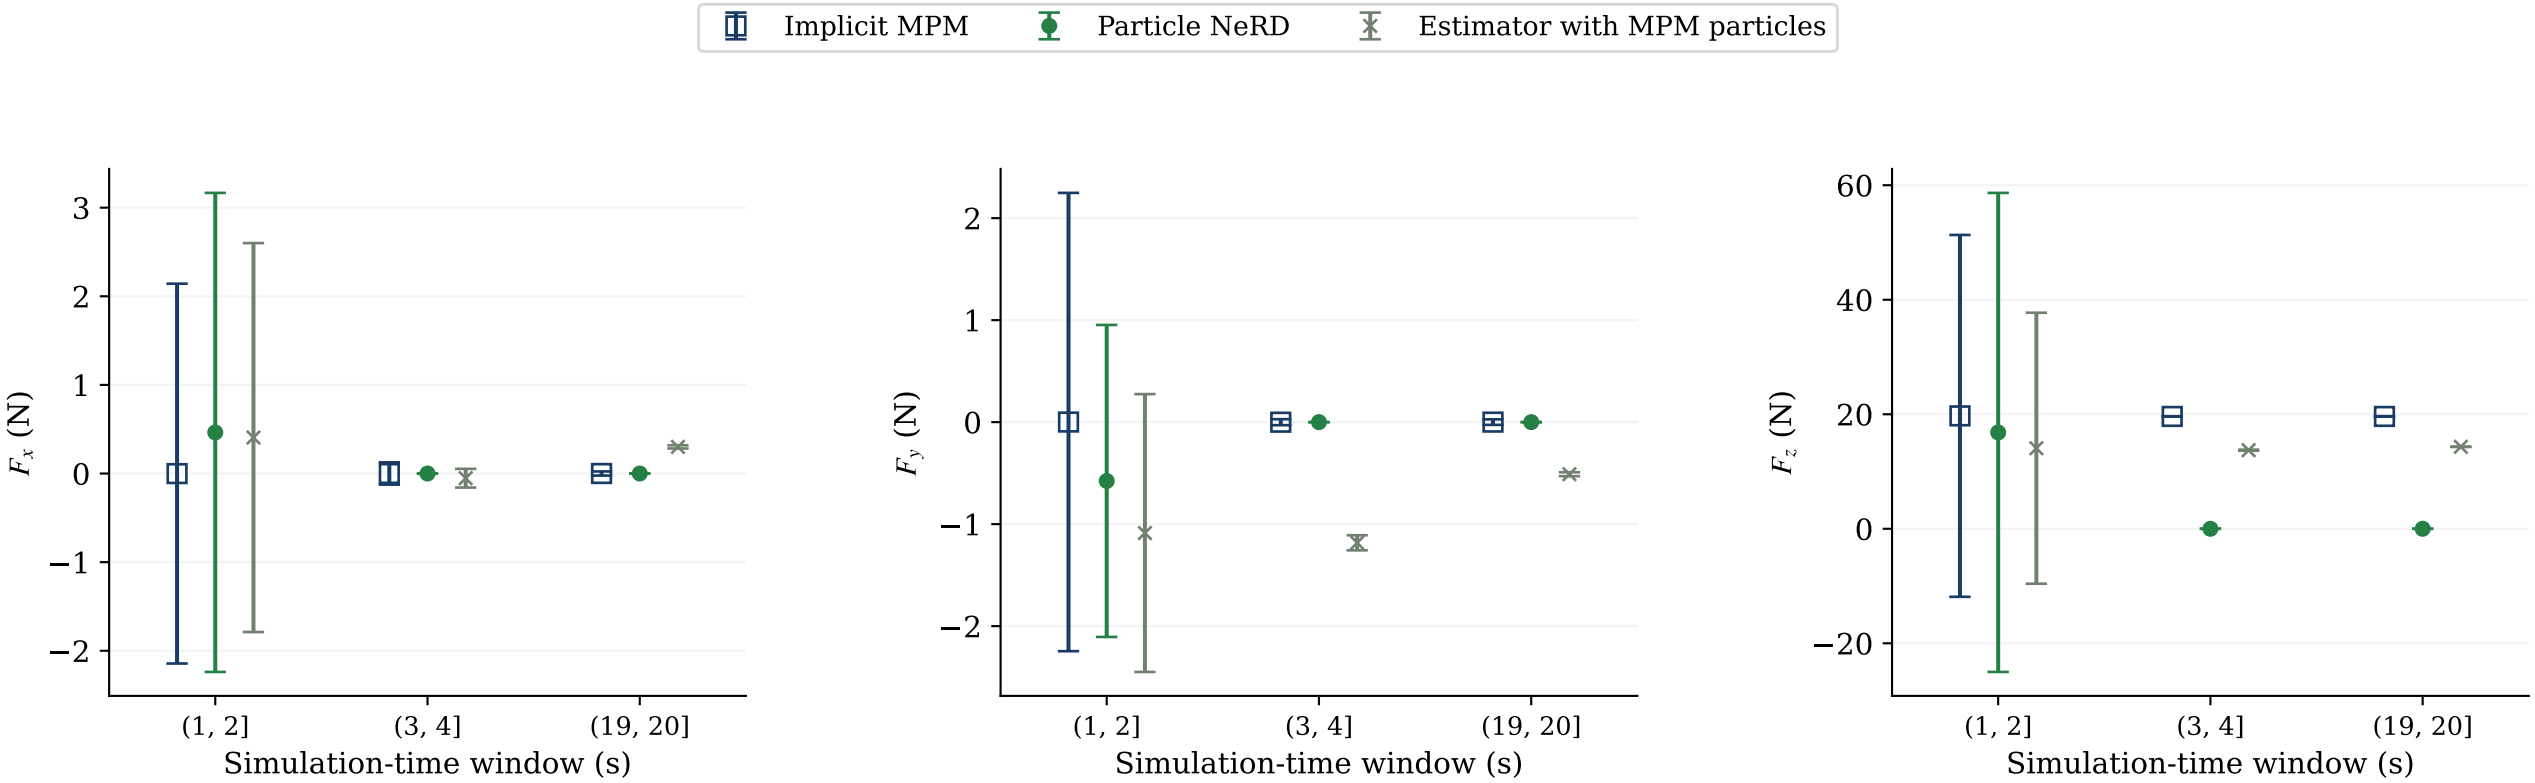

Figure 8: Frozen object-model checkpoint 6,000. Sphere [Dyn: Drop & Support 20s]; 20 s recording; one recorded-motion replay. Left to right: Fx, Fy, Fz. Means and population standard deviations over the labeled one-second windows. Methods are offset horizontally within each window; force samples are not shifted in time. All raw 200 Hz samples are used. Whiskers show temporal variability in one recording, not repeated-trial uncertainty. Full force traces appear above.
